

# Saanvi Pagadala's

Science Project, ESF STEAM FAIR 2023

# Introduction

Saanvi Pagadala

1st Grade

Oakhills Elementary

Ms. Day, class teacher

Ms. Eckerfield, STEAM teacher

# Project Title

## Is it Important to wash hands?

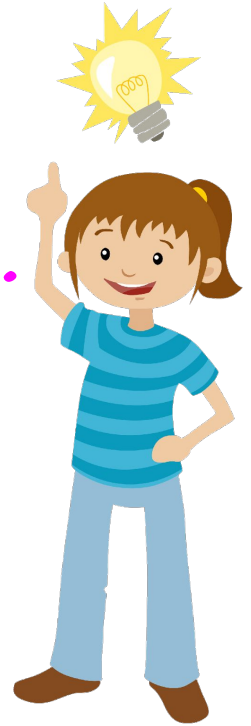

Category: Scientific Inquiry

Team: My Dad and I

# Hypothesis

We don't need to wash our hands ...

that much!

# Materials

Microscope and Accessories

Computer

Water Sample

Alcohol

# Procedure

## Step 1

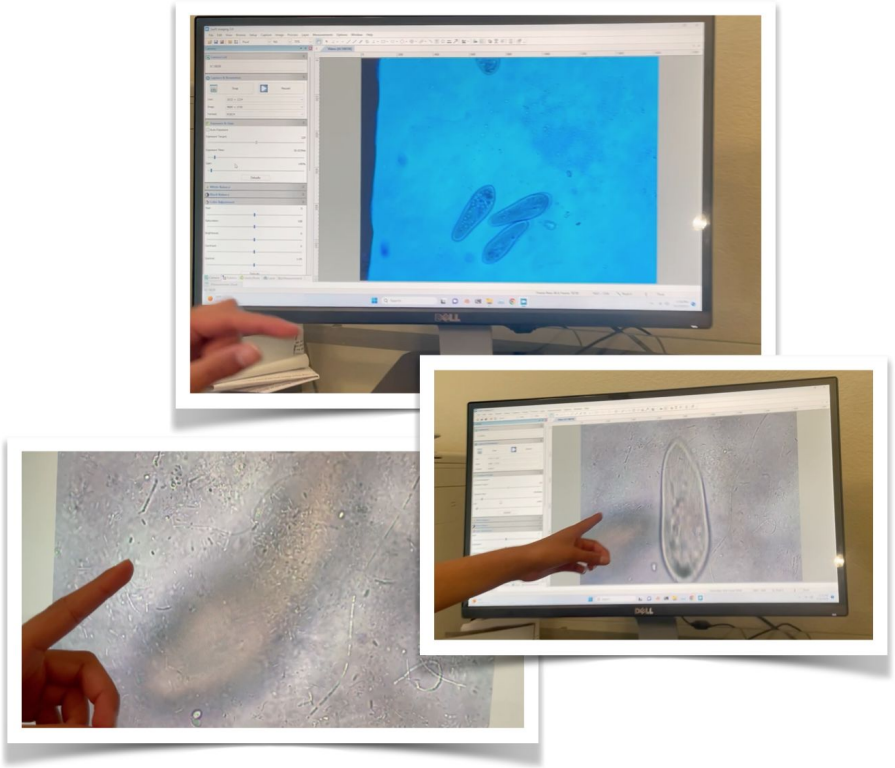

Play around the whole day without washing my hands.

## Step 2

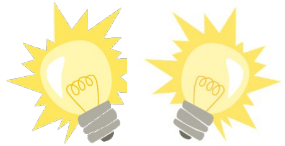

At the end of the day, rinse my hands in a bowl and observe the water sample under a microscope.

# Observation

I found many bacteria and other Germs, including Paramecium, on my hands, which could have made me sick.

# New Hypothesis

My first hypothesis was wrong …

It is time for a new hypothesis:

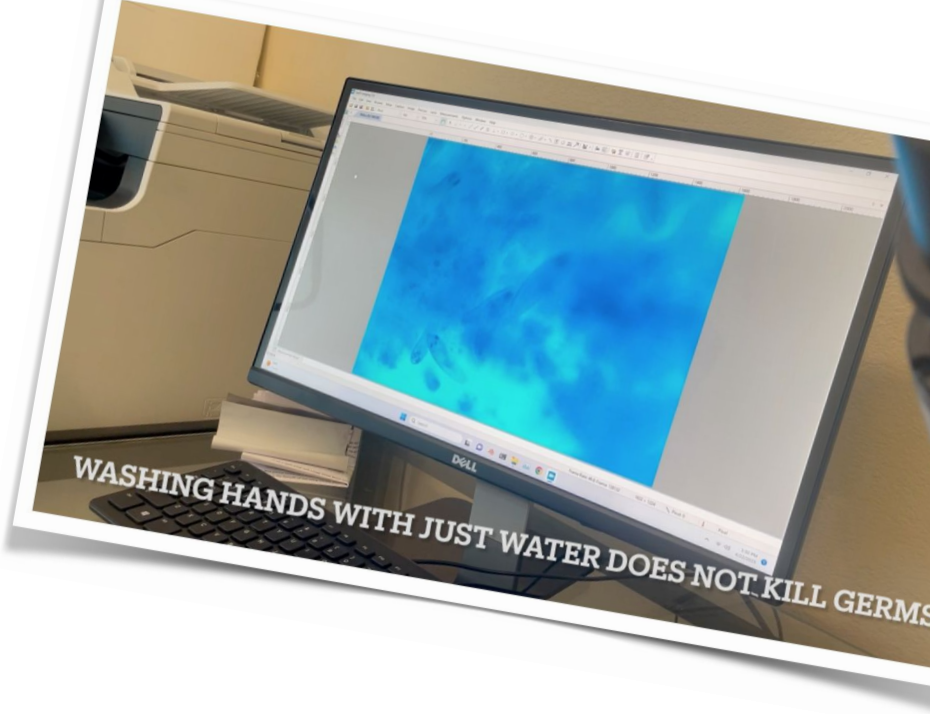

Maybe, I should wash my hands with Water.

# New Observation

Washing hands with just

Water does not kill Germs.

# Another New Hypothesis

Oh No! My hypothesis was wrong again …

It is time for another new hypothesis:

Maybe, I should wash my hands with Soap or hand sanitising Alcohol.

# New Observation

Alcohol instantly killed all the Germs.

My hypothesis was finally right.

# Conclusion

We should use Alcohol or Soap to clean our hands.

Thank you!

Scientific Temper,
don't lose it!
